

GSatTrack

Fuel Management

- Secure
- Efficient
- Easy to use
- Reliable

Start Savings on Fuel Costs Today!

With rising costs, fueling a fleet has reached an all time high. Now, more than ever, companies are in dire need of a fuel management system that tracks, monitors and protects its fuel assets. Our Fuel Management system does just that. It protects your bottom line by managing, securing and optimizing the process of fueling your fleet.

In The Truck

Vehicles in your fleet are the key targets for securing fuel assets. Protecting them on the road requires automation and awareness, both are offered through GSatTrack elements such as: Tamper Proof Locks, Fuel Level Sensors, Fuel Door Open & Shut Alerts, Plus More!

At The Pump

Eliminate fraud by controlling the fueling process through automated security measures. Pumps at your fueling stations only work with containers using the proper security device attached, otherwise the pump does not work. This is to ensure drivers, or anyone else, are not filling their own containers at your expense!

On The Road

Security measures taken at the pump can be applied with mobile fueling units as well. In addition, up-to-the-second diagnostics about your driver, truck, route taken, and fuel management are all recorded and sent to GSatTrack where they can be monitored and directed.

From Anywhere

GSatTrack can monitor and track your fleet's movements and maintain the ability to designate new routes or destinations in real-time via GSM and satellite. Obtain additional information such as Current Driver, Destination and more!

GSatTrack

Fuel Management

Commercial Solutions

Maintain, control and monitor fuel consumption and stock in your fleet. GSatTrack's Fuel Management System is designed to effectively measure, secure and manage the use of your fuel. It employs various methods and technologies to monitor and track fuel inventories, fuel purchases and fuel dispensed.

This information is then stored remotely and generates reports with data to inform management practices. We offer online monitoring and management to provide detailed fueling data and to control your fleets movements. This enables consumption control, cost analysis and tax accounting for fuel purchases.

Monitoring

- Live Monitoring
- Fuel Level Sensors
- Data Capture
- Date & Time
- ID Numbers
- Odometer
- Vehicle Hours
- Transactions
- Vehicle VIN

Diagnostics

- Fuel Type
- OBDII Logging
- Service Meter Logging
- Fuel Logging

Security

- Tamper Proof
- Alarms
- Fuel Tank Locks
- Coded Key Pads
- Smart Chip Keys
- Mag Strip Cards

Control

- Rerouting
- Driver Assignment
- Driver Auditing
- Waypoints
- Asset Routing
- Garmin Integration
